TomTom has announced its latest car kit for the iPhone. Designed to securely integrate the smartphone into your car.

The original TomTom car kit for the iPhone had a windscreen mount. The new car kit for however, screws onto a vehicle-specific ProClip mount that is fixed onto the driver's dashboard. This lets drivers choose a permanent location that works best for them, with no need to reposition it for each journey.

"This car kit for iPhone is designed with demanding drivers in mind," explains Tom Murray, vice president of market development. "It offers the fastest, neatest way to secure iPhone into a car. Plus they get all the features of the original TomTom car kit for iPhone, for the best in-car experience."

The new car kit broadens the TomTom for iPhone range, with features that further improve the in-car navigation experience for iPhone users. They include a GPS booster for uninterrupted navigation – even in built-up areas. A built-in microphone for hands free calling. Whilst an integrated speaker ensures navigation instructions are always clear.

An in-car charger keeps the iPhone battery topped up while on the go – essential for staying in touch with clients and colleagues. For an even neater integration, you can contact your garage for a direct power connection to your car battery.

The kit also comes with an audio out connector that lets you play your favourite music over your car stereo*. It even fades music out when receiving phone calls or navigation instructions.

Pricing and availability

The ProClip car kit for iPhone is available via www.tomtom.com and www.tomtom-proclip.com with a recommended price of £99.99.

Drivers can also purchase their vehicle-specific ProClip mount from the above link.

* Requires AUX IN car stereo and optional audio cable.
